This is supplementary content for Anderson, "Identity and Representation in the 2017 Disability March," published in *Kairos: Rhetoric, Technology, Pedagogy, 25*(2), Topoi, available at http://kairos.technorhetoric.net/25.2/topoi/anderson

## Identity and Representation in the 2017 Disability March

## Accessibility Highlight Video: Header

Visual description: This video shows a web developer tool that exposes the HTML for a page in the "Identity and Representation" webtext. Header information is visible in the HTML, including the title and author of the webtext.

Transcript: This is the first video in a series discussing accessibility choices in this webtext, and in this video I'd like to talk about header information. Every page in this webtext has contextual information attached to it in the head of the html. This information includes the author of the text, the title of the page, the language and characters used, and instructions for viewing that page. This information not only provides context for someone who is navigating without visual cues, it also gives assistive devices a reference point for properly reading the text.
